SKILLS

- Python
- SQL
- C++
- MS Office
- Polish Native
- English C1

PROJECTS

- **EEG-Based Emotion Detection System**

Led a team of four in developing a system for detecting emotions using EEG signals as part of a project in the Neuron Scientific Club.

- **Solving the N Queens Problem in 3D**

Collaborated in a two-person team to develop algorithms for solving the N Queens problem on a 3D N×N×N chessboard using CPLEX. Additionally, a visualization of the solution was implemented in Python.

- **Facial Emotion Recognition with CNN**

Developed a Convolutional Neural Network (CNN) for detecting facial emotions from images.

- **Biometric Authentication with EEG**

Currently working as a member of the AI section in the NeuroGuard project within the Neuron Scientific Club. My role involves developing models for biometric verification using EEG data.

ABOUT ME

Systems Engineering student at Wrocław University of Science and Technology with full-time availability, currently completing final degree requirements. Hands-on experience developing EEG-based machine learning models within academic project environments. Proactive troubleshooter who served as technical support at NeuroHackathon, assisting teams with hardware setup and live debugging. Seeking an entry-level IT role to apply practical engineering skills.

EDUCATION

Systems Engineering
Wrocław University of
Science and Technology
2022 - now

II High School in Legnica
2019 - 2022

EXPERIENCE

Receptionist
Rynek 30 Hostel
26.07.2024 - 31.12.2024

Internship in a warehouse
Boart Longyear
01.08.2022 - 30.09.2022

ACHIEVEMENTS

- 02.2022 – Participation in the second stage of the 29th **Olympiad in Informatics**.
- In 2021 and 2022, achieving the title of Laureate in the nationwide **Studium Talent** competition in mathematics.

I hereby give consent for my personal data to be processed for the purpose of conducting recruitment for the position for which I am applying.
